

Macintosh Data Recovery

Recover data from damaged, deleted, or Mac volumes.

Stellar Phoenix Mac data recovery software helps you to recover your files, photos, music & videos from almost all instances of data loss. Few commonly reported data loss scenarios where Stellar Phoenix Mac can help you restore your lost data are:

- If your hard drive won't mount
- If your hard drive is corrupt and you can't get files from it
- If you have deleted files that you would like to recover
- You have initialized your hard drive or deleted the volumes
- Your hard drive has developed bad sectors

Software supports following file system

- Mac library files like iCal (ICS) and iPhoto.
- **Stellar Phoenix Macintosh** is capable to archive all documents and various file formats including Stuffit (SIT), Minhex Archive (HQX), RAR Files (RAR), Zip Archive (Zip), Apple Script (SCPT), Apple Works Document (CWK), Quick Books (QBB), Macromedia Flash (SWF/FWS), Macromedia Flash (SWF/FLV), Mathematica Player (NBP).
- Supports multimedia files including AVI, WAV, MOV, MIDI, AIFF, ASF, WMV, MP4, M4A, OFF, WMA, RPS, M4P, AU, and MP3.

Stellar Phoenix Mac data recovery is the best help that you could ask when you have lost your data. Stellar Phoenix would scan your drive for lost data, analyze and build a list of recoverable files and folders that you can recover. Recover the entire drive contents or select the files & folders that you wish to recover.

It is Safe, Recovers Hard Drives, CD & DVD and Previews Pictures:

Stellar Phoenix Mac is safe as it does not repair your drive or perform disk any write operation on to your inaccessible drive. In addition to hard drives, fire wire, USB and Lacie drives; Stellar Phoenix Mac can also recover data from inaccessible CD and DVD storage media too. The program has a built in picture viewer that can preview contents of recoverable images. You can view the files by double clicking on the file name.

3 Powerful Options to Search, Locate & Recover Lost Data:

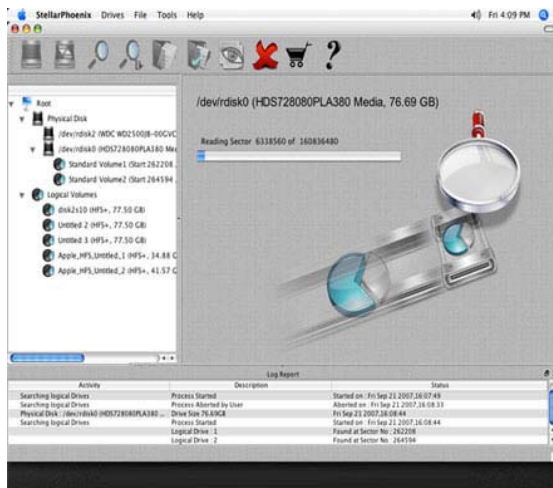

Stellar Phoenix Mac is very powerful and can search for lost data using a Standard Search, Advanced Search or Deleted File Search methods. Standard search is recommended as the first step and is a quick search method to locate your lost data.

Use Advanced Search in case you are not able to see your files after a Standard Search volume scan. Advanced Search takes more time but would be able to scan your lost data more effectively.

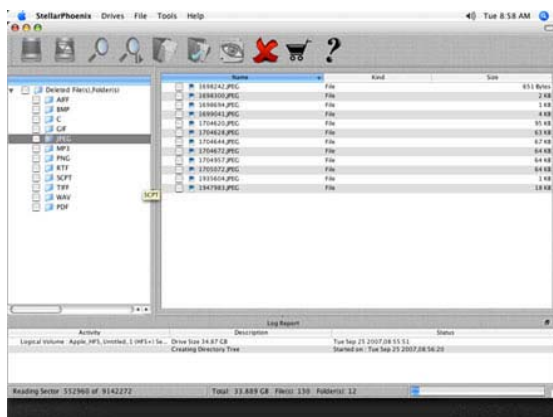

Use the Deleted File Scan option to search for the files that you have deleted and emptied the trash bin

Search Lost Volumes:

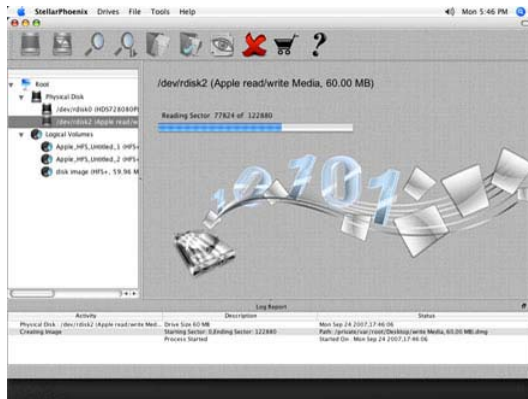

If your hard drive volumes are missing; use this fantastic feature to scan and locate all the volumes in your hard drive. Once the scan is completed, the found volumes are added to the tree and can be scanned for data.

RAW Scan Recovery:

In many cases search options will be unable to discover lost data from badly damaged hard drive, volume or Cd/DVD. Raw data recovery option will help you to extract all the data from the severely damaged hard disk and displays the result in the tree view according to the file types. Stellar Phoenix Mac supports 60 file types and has a feature to add new file types too.

Image Drive:

When your hard drive, CD/DVD or a volume has developed bad sectors. It is highly recommended that you should create an image of your logical volume or a hard drive using the imaging feature. This feature can increase the speed of scan results. You can image the entire drive or a selected region.

Great Controls

Save Scan Results

This feature can be of great help when you want to perform data recovery in parts. If it is late in the evening or you have to rush for another work you can stop recovery of data and begin the task again. Just save the scan results and load them once you are ready to begin.

Find File

Use Find File control if you are looking for a particular file name and you do not remember where you had stored it. Find option will highlight the specified file wild card in the list of files displayed in the right pane. The first file is highlighted and Find Next will take you to the next file.
