

Stellar Phoenix CD ROM Data Recovery Software

Stellar Phoenix CD ROM

Stellar Phoenix CD-ROM is software which can be used to recover data from media such as CD-ROM, CDR and CD-RW. The software has an easy to use graphical Interface and requires no prior knowledge of data recovery. It supports both the Joliet and the ISO9660 file systems created on all major Operating Systems including Windows, Linux, and UNIX distributions.

Stellar Phoenix follows a 3 step process in recovering lost data. The software has a fully automated wizard which walks you through these simple steps:

Evaluation - Phoenix identifies the device, locates all partition(s) on this inaccessible disk and then displays them in a list.

Analysis - It examines the remains of the file structure and the data area of the inaccessible drive and works out the best path to recover files and directories.

Recovery - All recoverable files and directories are presented in a tree structure. You can select any amount of data, from one file to an entire drive, and move it to a safe location.

Key Features:

- File recovery from damaged CDRom, CD-R and CD-RW.
- Data recovery when TOC (Table of Contents) is bad or damaged.
- Fully automatic CD Data Recovery software provides data recovery even after primary volume descriptor and secondary volume descriptor are corrupt or physically damaged.
- Data recovery when data cannot be accessed and the disk indicates that it is full.
- Provides file recovery from disks with physical damages: scratch, bubbles, cracks and warping.

File System Supported:

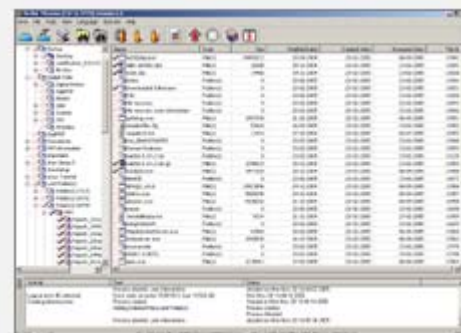

- ISO 9660 and Joliet created on any of the major Operating Systems.

Systems Requirement:

- Operating System: Windows NT/2000/XP.
- RAM: 64MB minimum (128 MB recommended)
- Hard Disk: 5MB of free space

Software License Options:

- Single User License
- Administrator License
- Technician License
