

Stellar Phoenix Linux

Data Recovery Software

Stellar Phoenix Linux

Phoenix Linux is fully automatic data recovery software for the Ext2 and Ext3 file systems running on the Linux Operating System. It makes use of unique scanning methods which is able to automatically recognize lost partitions, volumes, files, and folders. All major hard disk types are supported including IDE, EIDE, ATA, and SCSI.

Phoenix is compatible with all versions of Linux including Red Hat, Suse, Caldera, SCO, Debian, Mandrake, Sorcerer, TurboLinux, Slackware, Gentoo and others.

Evaluation - Phoenix identifies the device, locates all partition(s) on this inaccessible disk and then displays them in a list.

Analysis - It examines the remains of the file structure and the data area of the inaccessible drive and works out the best path to recover files and directories.

Recovery - All recoverable files and directories are presented in a tree structure. You can select any amount of data, from one file to an entire drive, and move it to a safe location.

Key Features:

- Provides partition recovery from deleted logical partitions.
- Allows data recovery from missing files and folders.
- Provides recovery of deleted file(s) for the Ext2 File System.
- Volume recovery on Linux systems with damaged Super Block or Inode List.
- The software scans the disk trying to find previously existing partitions thus allowing Linux.

Partition Data Recovery

- File recovery from IDE/EIDE/ATA & SCSI hard drive media.
- File & Folder recovery under sub-directories after the parent directory is deleted or missing.

File System Supported:

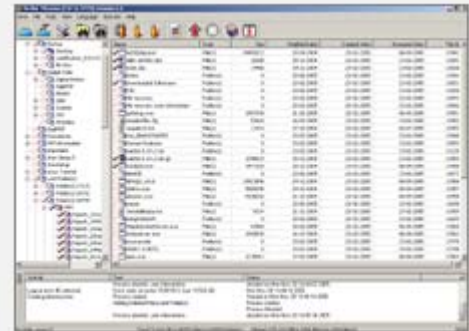

- Ext2 and Ext3

Systems Requirement:

- Operating System: Windows 98/ME/NT4.0/2000/XP/2003
- RAM: 64 MB minimum (128 MB recommended)
- Hard Disk: 5 MB of free disk space

Software License Options:

- Single User License
- Administrator License
- Technician License
