## Stellar Phoenix Photo Recovery 6

# Life Saver...!

You might have had the heart-breaking experience of accidentally deleting data on your hard drive or memory card including photographs and videos. There are quite a few data recovery tools available in the market, but almost none of them have the features of Stellar Phoenix Photo Recovery. Stellar has released Photo Recovery 6, the latest in the series, which promises many improvements over the previous versions.

### Key Features

Stellar Phoenix Photo Recovery 6 is an affordable, easy-to-use, and fast data recovery tool. It can effectively recover photos, videos and music files stored in any media such as memory card, mobile phone, hard disk drive, and USB storage. It can recover and restore files even from formatted memory. The latest version of the software has a 30 percent faster scanning engine and a new interface. You can recover the lost files in three easy steps: Scan, Preview, and Recover. A very important feature of this tool is that you can recover the files with the original file names and with the original

date and time, which is not possible with most other recovery tools. It supports up to 50 TB of storage space and more than 50 multimedia file types including Raw formats of prominent camera manufacturers. Another important feature of the Data Recovery 6 is that it can now preview and recover HD movie files also. Even corrupted files can be partly recovered in the form of thumbnails with the Phoenix Photo Recovery 6.

The preview files can be arranged in three different views— Cover Flow, Thumbnail, and List View, which allows you to preview the images and select only those that are important to you. For this, the Phoenix Photo Recovery 6 lists the files with the file formats in a tree view along with respective checkboxes. This allows you to recover only one type of file if necessary.

### Evaluation

The Stellar Phoenix Photo Recovery tool is very easy to use, requiring no special skills or training. Hence the evaluation process was also quite simple. We could

**87%**  
**Rs.2683.14**

## Stellar Phoenix Photo Recovery 6

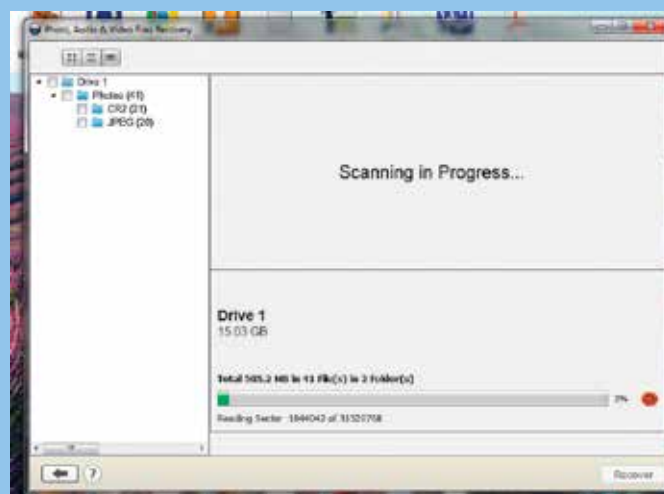

## Getting familiar

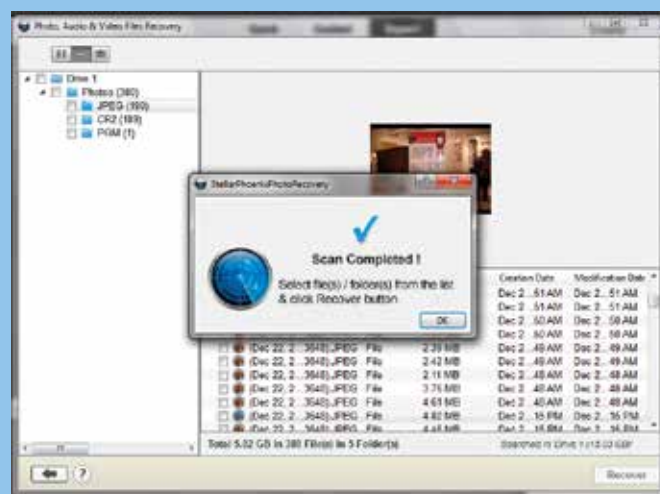

On the home screen, click **Recover Photo, Audio & Video**

USB drive detected. Click **'Start Scan'**

**Scanning**

**Scan Complete**

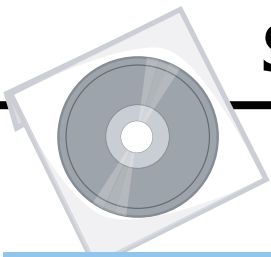

recover all the lost data from formatted memory cards and hard disk drives in the three easy steps mentioned above. The scanning speed was quite fast with the software previewing about 5 GB of formatted data in under 10 minutes. We tried with different memory cards and different file types including JPEG, mp3, CR2 and NEF. Though we could not compare Phoenix Photo Recovery 6 side-by-side with other recovery tools,

this was much faster and efficient than other tools we have used before.

Stellar has provided detailed instructions on their website ([www.stellarinfo.com](http://www.stellarinfo.com)). The tool provides free update through the Auto Update Wizard feature. The package also includes free consultation 24-hour online support, premium support, and 30-days money-back guarantee.

### Value for Money

The Stellar Phoenix Photo Recovery 6 is available for purchase at Rs.2683.14. We would consider this a very competitive price for such a useful product. You can download the software from the website [www.stellarinfo.com](http://www.stellarinfo.com). You can also download a free trial version if you are keen to try it out. But to save the recovered files, you will require a full version of the software.
